## **LICENSE AGREEMENT FOR “CONFIGURATION TOOL OF BACnet® GATEWAY FOR VRF SYSTEM” IMPORTANT-READ CAREFULLY**

This “CONFIGURATION TOOL of BACnet® GATEWAY for VRF SYSTEM” License Agreement (“LICENSE AGREEMENT”) is a legal agreement between you and Fujitsu General Limited (“FGL”) for the use of CONFIGURATION TOOL for VRF BACnet® GATEWAY products consisting of computer software and online, electronic and/or printed documentation (collectively “SOFTWARE PRODUCT” or “SOFTWARE”). By installing, copying, or otherwise using the SOFTWARE PRODUCT, you accept to be bound by all of the terms and conditions of this LICENSE AGREEMENT. If you do not agree to any of the terms and conditions of this LICENSE AGREEMENT, you shall not use the SOFTWARE PRODUCT and shall promptly return the SOFTWARE PRODUCT to the place where you have obtained it.

### **1. COPYRIGHT AND OWNERSHIP.**

The SOFTWARE PRODUCT is protected by copyright laws and international copyright treaties as well as other intellectual property laws and treaties. The SOFTWARE PRODUCT is licensed to you, not sold. FGL owns the title, copyright, and other intellectual property rights in the SOFTWARE PRODUCT.

### **2. GRANT OF LICENSE.**

FGL hereby grants you the limited, non-exclusive and non-transferable rights to use the SOFTWARE PRODUCT only for the purpose of controlling the VRF air-conditioning system products (VRF) provided you comply with all terms and conditions of this LICENSE AGREEMENT.

### **3. DESCRIPTION OF OTHER RIGHTS AND LIMITATIONS.**

#### **(1) LIMITATIONS ON REVERSE ENGINEERING, DECOMPILATION, AND DISASSEMBLY.**

You shall not modify, alter, reverse engineer, decompile, or disassemble the SOFTWARE PRODUCT. You shall not alter or remove any copyright, trademark or other proprietary notice of FGL from the SOFTWARE PRODUCT.

#### **(2) NO RENTAL, LEASE AND TRANSFER.**

You shall not rent, lease or transfer the SOFTWARE PRODUCT to any person and/or entity (-ies).

#### **(3) TERMINATION.**

Without prejudice to any other rights, FGL may terminate this LICENSE AGREEMENT if you fail to comply with any terms and conditions of this LICENSE AGREEMENT. In such an event, you shall promptly return all originals and copies of the SOFTWARE PRODUCT to FGL.

### **4. INSTALLATION AND USE OF SOFTWARE PRODUCT.**

You may install and use the enclosed SOFTWARE PRODUCT on any computer under one of the operating environment identified in the documentation accompanying the SOFTWARE. The infrastructure necessary to use the SOFTWARE PRODUCT (PC, accessories, etc.) shall be prepared separately by you.

### **5. NO WARRANTY.**

FGL EXPRESSLY DISCLAIMS ANY WARRANTY FOR THE SOFTWARE PRODUCT. THE SOFTWARE PRODUCT IS PROVIDED “AS IS” WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, STATUTORY WARRANTIES, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY’S RIGHTS. THE ENTIRE RISKS ARISING OUT OF USE OR PERFORMANCE OF THE SOFTWARE PRODUCT REMAIN WITH YOU. HOWEVER, IF YOU NOTIFY FGL OF PHYSICAL DEFECT OF THE MEDIA CONTAINING SOFTWARE WITHIN (90) DAYS FOLLOWING YOUR RECEIPT OF THE SOFTWARE PRODUCT, FGL WILL REPLACE THE DEFECTIVE MEDIA WITH NEW MEDIA.

### **6. LIMITATION OF LIABILITY.**

IN NO EVENT SHALL FGL BE LIABLE TO YOU OR TO ANY THIRD PARTY FOR ANY DIRECT OR INDIRECT DAMAGES WHATSOEVER (INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOSS OF BUSINESS PROFIT, BUSINESS INTERRUPTION OR LOSS OF BUSINESS INFORMATION, DAMAGES ARISING OUT OF DATA OR INFORMATION

DERIVED FROM THE SOFTWARE OR ANY OTHER PECUNIARY LOSS), ARISING OUT OF THE USE OR INABILITY TO USE THE SOFTWARE, EVEN IF FGL HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

## **7. ENTIRE AGREEMENT.**

This LICENSE AGREEMENT (including any addendum or amendment to this LICENSE AGREEMENT included with the SOFTWARE PRODUCT) is the entire agreement between you and FGL relating to the SOFTWARE PRODUCT and supersedes all prior contemporaneous oral or written communications, proposals and representations with respect to the SOFTWARE PRODUCT or any other subject covered by this LICENSE AGREEMENT.

## **8. INDEMNITY.**

You agree to indemnify and hold FGL, and its subsidiaries, affiliates, officers, agents, co-branders or other partners, and employees, harmless from any damage, claim or demand, including without limitation reasonable attorneys' fees, made by any third party due to or arising out of use of the SOFTWARE PRODUCT.

## **9. GOVERNING LAW AND JURISDICTION.**

This LICENSE AGREEMENT is governed by the laws of JAPAN. You and FGL hereby irrevocably consent to the exclusive jurisdiction and venue in the Tokyo District Court and other higher courts having jurisdiction in Japan for the settlement of disputes arising under or in connection with this LICENSE AGREEMENT.

## **10. LANGUAGE OF AGREEMENT.**

This LICENSE AGREEMENT shall be agreed based on the English language. The text in other language is made for reference purpose only and if there are any discrepancies between the English text and the text in other language, the English text shall prevail.

## 1 Description

### 1.1 Introduction

This document describes the integration of Fujitsu VRF air conditioning systems into BACnet compatible devices and systems using the BACnet Gateway for VRF System.

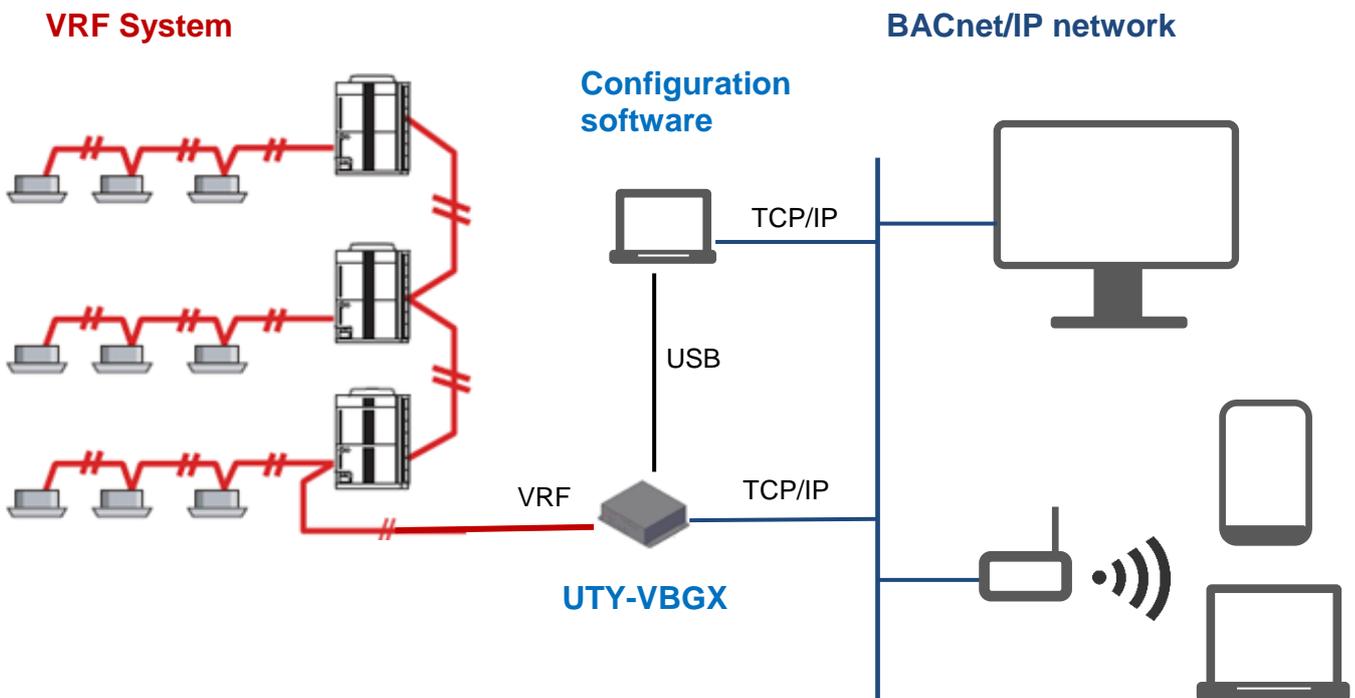

The aim of this integration is to monitor and control your Fujitsu VRF air conditioning system, remotely, from your Control Center using any commercial SCADA or monitoring software that includes a BACnet/IP driver. To do it so, the BACnet Gateway for VRF System allows BACnet/IP communication, acting as a server, allowing polling or subscription requests (COV).

The BACnet Gateway for VRF System makes available the Fujitsu air conditioning system indoor and outdoor units and its abstraction of Fujitsu air conditioning system properties and functionalities as fixed and independent BACnet Objects.

Simple configuration is needed: just select the appropriate communication parameters.

Up to 128 indoor units supported.

This document assumes that the user is familiar with BACnet and Fujitsu technologies and their technical terms.

## 1.2 Functionality

The gateway continuously polls (reads) the VRF network for all configured signals and keeps the updated status of all of them in its memory, ready to be served when requested from the BACnet side.

The role of the gateway consists in associate the elements of the FGL indoor and outdoor units with BACnet objects.

The control of the indoor and outdoor units through the FGL bus is permitted, so commands toward the FGL indoor and outdoor units are allowed.

Each indoor and outdoor unit is offered in a set of BACnet objects.

Element	Object supported
Gateway	<ul style="list-style-type: none"> <li>• Status</li> <li>• Command</li> <li>• Error</li> </ul>
Indoor Unit	<ul style="list-style-type: none"> <li>• Status</li> <li>• Command</li> <li>• Error</li> </ul>
Outdoor Unit	<ul style="list-style-type: none"> <li>• Status</li> <li>• Command</li> <li>• Error</li> </ul>

## 1.3 Capacity of UTY-VBGX

Element	Max.	Notes
Number of indoor units	128	Number of indoor units that can be controlled through UTY-VBGX
Number of outdoor units	128	Number of outdoor units that can be controlled through UTY-VBGX
Number of VRF systems	1	Number of independent VRF systems that can be controlled through UTY-VBGX
Number of Refrigerant systems	32	Number of refrigerant system that can be controlled through UTY-VBGX
Number of Objects	5000	Number of FGL control and status objects available into UTY-VBGX.

The number of *Indoor Units* and *Outdoor Units* may vary on each project. These parameters can be configured through Configuration Tool (See section 0).

## 2 Protocol Implementation Conformance Statement

### BACnet Protocol Implementation Conformance Statement (PICS)

**Date:** 2016-12-20

**Vendor Name:** Fujitsu General Limited

**Product Name:** BACnet Gateway for VRF

**Product Model Number:** UTY-VBGX

**Application Software Version:** 1.0.0.0

**Firmware Revision:** 1.0.0.0

**BACnet Protocol Revision:** 12

**Product Description:**

*BACnet Gateway for VRF System*

### 2.1 BACnet Standardized Device Profile (Annex L):

- BACnet Operator Workstation (B-OWS)
- BACnet Building Controller (B-BC)
- BACnet Advanced Application Controller (B-AAC)
- BACnet Application Specific Controller (B-ASC)
- BACnet Smart Sensor (B-SS)
- BACnet Smart Actuator (B-SA)

Additional BACnet Interoperability Building Blocks Supported (Annex K):  
*Reference of BIBBs List*

### 2.2 Segmentation Capability:

- |                               |                             |   |                       |
|-------------------------------|-----------------------------|---|-----------------------|
| Segmented request supported   | <input type="checkbox"/> No | <input checked="" type="checkbox"/> Yes | Window Size <u>16</u> |
| Segmented responses supported | <input type="checkbox"/> No | <input checked="" type="checkbox"/> Yes | Window Size <u>16</u> |

### 2.3 Data Link Layer Options:

- BACnet IP, (Annex J)
- BACnet IP, (Annex J), Foreign Device
- ISO 8802-3, Ethernet (Clause 7)
- ANSI/ATA 878.1, 2.5 Mb. ARCNET (Clause 8)
- ANSI/ATA 878.1, RS-485 ARCNET (Clause 8), baud rate(s) \_\_\_\_\_
- MS/TP master (Clause 9), baud rate(s): \_\_\_\_\_
- MS/TP slave (Clause 9), baud rate(s): \_\_\_\_\_
- Point-To-Point, EIA 232 (Clause 10), baud rate(s): \_\_\_\_\_
- Point-To-Point, modem, (Clause 10), baud rate(s): \_\_\_\_\_
- LonTalk, (Clause 11), medium: \_\_\_\_\_
- Other: \_\_\_\_\_

## 2.4 Device Address Binding:

Is static device binding supported? (This is currently necessary for two-way communication with MS/TP slaves and certain other devices.)  Yes  No

## 2.5 Networking Options:

- Router, Clause 6 - List all routing configurations, e.g., ARCNET-Ethernet, Ethernet-MS/TP, etc.
- Annex H, BACnet Tunneling Router over IP
- BACnet/IP Broadcast Management Device (BBMD)  
Does the BBMD support registrations by Foreign Devices?  Yes  No

## 2.6 Character Sets Supported

Indicating support for multiple character sets does not imply that they can all be supported simultaneously.

- ISO 10646 (UTF-8)  IBM™/Microsoft™ DBCS  ISO 8859-1
- ISO 10646 (UCS-2)  ISO 10646 (UCS-4)  JIS X 0208

## 2.7 Gateway

If this product is a communication gateway, describe the types of non-BACnet equipment/network(s) that the gateway supports:

**Fujitsu VRF Air Conditioning Network.**

5.3 Objects and properties

Below you can find relevant information for the objects and properties.

**Object\_Identifier:** In the **Device Object**, the value of object instance is configurable through Configuration Tool. See Table 5.1 to obtain the name of each object.

Variable	Description
"rr"	Refrigerant Address (0..99)
"uu"	Outdoor Unit address (0..3)
	Indoor Unit address (0..63)

Table 5.1 Objects and properties variables and descriptions

**Object\_Name:** In the **Device Object**, this string is configurable through Configuration Tool. See Table 5.1 to obtain the name of each object.

**Description:** In the **Device Object**, this string is configurable through Configuration Tool. See Table 5.1 to obtain the description of each object.

**Relinquish\_Default:** In **Binary Outputs**, **Multistate Outputs** and **Multistate Values**, the value of *Present\_Value* property will be read.

**Priority\_Array:** In **Binary Outputs**, **Multistate Outputs** and **Multistate Values**, *Priority\_Array[16]* will acquire the value of *Present\_Value* property and *Priority\_Array[1]~[15]* will be NULL.

**State\_Text:** In **Multistate Outputs**, **Multistate Outputs** and **Multistate Values**, it cannot be read the whole array at once, so "Array Index" must be specified in order to obtain the text of the corresponding state.

## 6 Connections

**NOTE:** Torque to be applied on the ties and power connector screws (1,2,3) is 1.2 Nm

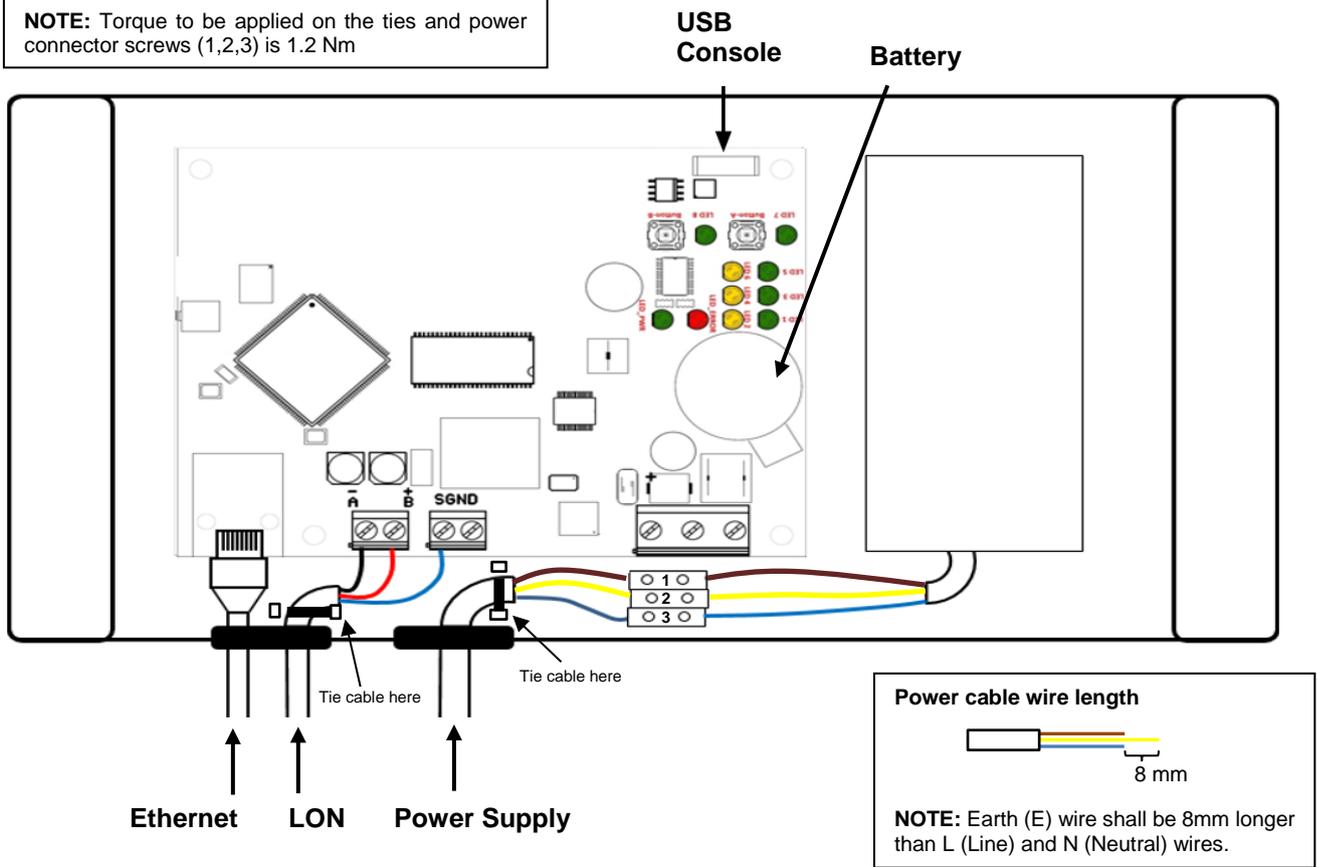

Figure 6.1 Gateway connections

**NOTE:** Mount the device in a vertical position and ensure proper space for all connectors when mounted. Product is to be connected only to Ethernet and LON networks without routing to the outside plant and connect to outdoor devices through SELV ports.

**CAUTION:** Risk of explosion if battery is replaced by an incorrect type. Dispose of used batteries according to the instructions.

**IMPORTANT:** Tight the Power Supply and the LON cables to one of the 4 cable tie holes fixed to the casing with the plastic ties inside the BACnet Gateway for VRF System. Do not use 2 holes to tie one cable.

### Power Supply

Connect mains to the power supply connector as:

- 1.- Brown: Line (L)
- 2.- Yellow: Earth / Ground (E)
- 3.- Blue: Neutral (N)

A readily accessible disconnect device shall be incorporated in the building installation wiring.

### Ethernet / BACnet IP (UDP) / Console (UDP & TCP)

Connect the cable coming from the IP network to the connector ETH of the gateway. Use an Ethernet CAT5 cable.

### VRF Network

Connect the LON bus to connectors A3 (+), A4 (-) and A1/A2 (SNGD) of gateway's PCB. Respect the polarity.

### Console Port

Connect a mini-type B USB cable from your computer to the gateway to allow communication between the Configuration Software and the gateway. Remember that Ethernet connection is also allowed for configuration.

## 6.1 Power device

The first step to perform is to power up the device. To do so, a power supply working with any of the voltage range allowed is needed (check section 10). Once connected the ON led will turn on.

## 6.2 Connect to BACnet

Connect the communication cable coming from the network hub or switch to the Ethernet port (Figure above) of the gateway. The cable to be used depends on where the gateway is connected:

- Connecting directly to a BACnet/IP device: a straight Ethernet UTP/STP CAT5 cable
- Connecting to a hub or switch of the LAN of the building: a straight Ethernet UTP/STP CAT5 cable

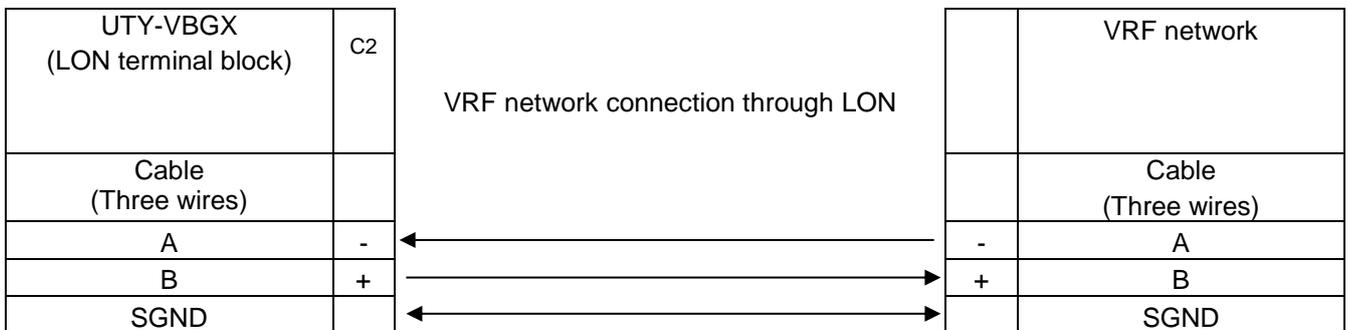

In case there is no response from the BACnet devices to the frames sent by gateway, check that they are operative and reachable from the network connection used by the gateway. Check the gateway Ethernet interface sending Pings to its IP address using a PC connected to the same Ethernet IP network. If the problem persists communicating through the LAN of the building, contact the network administrator and make sure traffic on the port used is allowed through all the LAN path.

The BACnet Gateway for VRF System comes with DHCP functionality enabled by default.

## 6.3 Connect to Fujitsu interface

Use the LON connector in the left bottom corner of the gateway in order to connect the VRF network to the UTY-VBGX. Remember to follow all safety precautions indicated by Fujitsu.

Modifying some other parameters can affect proper communication.

## 6.4 Connect to PC (Configuration tool)

This action allows the user to have access to configuration and monitoring of the device. Two methods to connect to the PC can be used:

- Ethernet: Using the ETH port of the gateway. How to check connectivity is explained in section 6.1.
- USB cable: To connect the device to the PC the USB cable supplied should be plugged to the USB Console port.

## 7 Set-up process and troubleshooting

### 7.1 Pre-requisites

It is necessary to have the BACnet/IP client device (BMS side device) operative and properly connected to the BACnet/IP port of the gateway. It is also required to have the VRF network connected to the gateway through LON wiring as defined by the standard.

Connectors, connection cables, PC for the Configuration Tool usage and other auxiliary material, if needed, are not supplied by FGL for this standard integration.

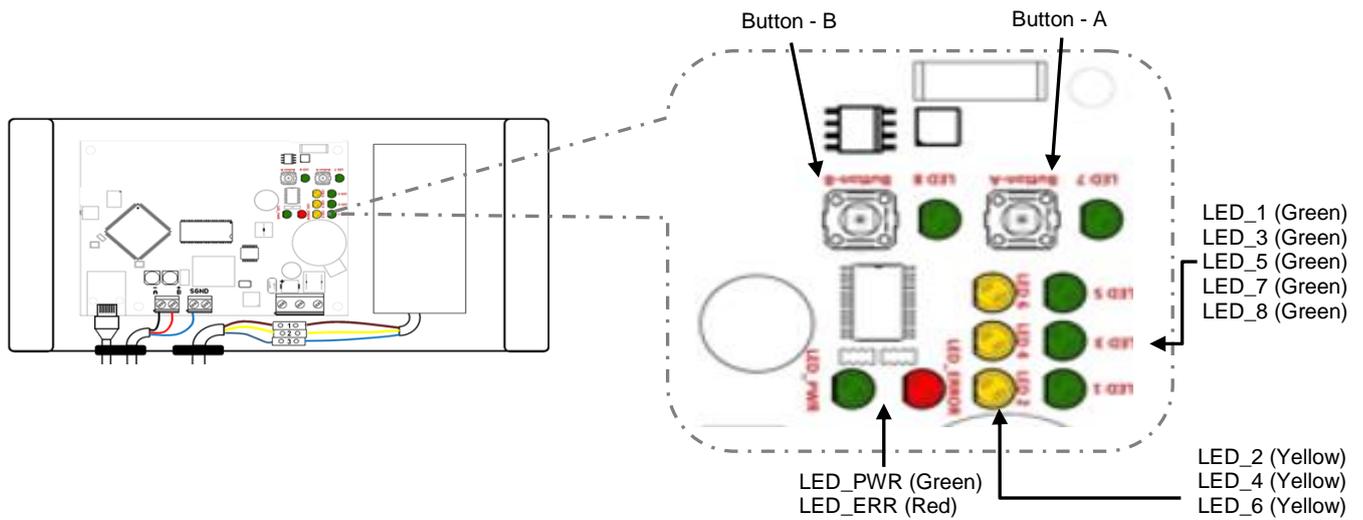

Items supplied with this product for this integration are:

- BACnet Gateway for VRF device with firmware loaded.
- Configuration Tool to configure the BACnet Gateway for VRF.
- USB Console cable to communicate with the BACnet Gateway for VRF.
- Product documentation.

### 7.2 Set-up procedure

1. Install the Configuration Tool in your laptop, use the setup program supplied in the USB memory stick supplied with this product and follow the instructions given by the installation wizard.
2. Install the gateway in the desired installation site. The mounting can be on a stable not vibrating surface. The direction of the mounting of the case must be such that there are no cable opening towards the bottom side.
3. Connect the communication cable coming from the BACnet/IP network to the port marked as **Ethernet** of the gateway (More details in section 6.1).
4. Connect the communication cable coming from the FGL bus to the port marked as **AB SGND** of the gateway (More details in section 6.3).
5. Power up the gateway. Take care of the polarity of the supply voltage applied (More details in section 6.3).
6. Connect your laptop or desktop to the gateway (More details in section 6.4).
7. Open the Configuration Tool, create a new project. Select the connection mode to be used to connect to the gateway and click on the **Connect** button.
8. Modify the configuration as desired, save it and download the configuration file to the gateway (More details in section 0).
9. Open the *BACnet Communication Viewer* window and check that there is communication activity, some TX frames and some other RX frames. This means that the communication with the BACnet master device is OK. In case there is no communication activity between the gateway and the BACnet device check that it is operative and the communication cable used to connect both devices.
10. Open the *Fujitsu Communication Viewer* window and check that there is communication activity, some RX frames. This means that the communication with the VRF network is OK. In case of no communication activity, check that the VRF network is operative and well configured and check also the communication cable used to connect both systems.

## 7.3 LEDs status and push buttons

LED	Description
<b>LED_ERR (red)</b>	Gateway error state indication. If active, contact your supplier.
<b>LED_PWR (green)</b>	Power-on. HW-controlled / non-FW.
<b>LED_1 (green)</b>	Ethernet LNK led. Same as Ethernet green led.
<b>LED_2 (yellow)</b>	Ethernet ACT led. Same as Ethernet yellow led.
<b>LED_3 (green)</b>	Fujitsu bus TX activity.
<b>LED_4 (yellow)</b>	Fujitsu bus RX activity.
<b>LED_5 (green)</b>	BACnet TX LED.
<b>LED_6 (yellow)</b>	BACnet RX LED.
<b>LED_7 (green)</b>	Service led of LON port.
<b>LED_8 (green)</b>	Device has IP address (after DHCP or manually assigned).

Button	Description
<b>PUSH_A</b>	Sends I-Am msg on bacnet-ip side.
<b>PUSH_B</b>	Service pin of LON port.

## 8 Configuration Tool for BACnet Gateway (UTY-VBGX)

### 8.1 Introduction

The Configuration Tool for BACnet Gateway is a Windows® compatible software developed specifically to monitor and configure the UTY-VBGX gateway.

In order to install the software, simply execute the installer within the USB memory stick supplied with this product and follow instructions on the wizard.

### 8.2 Welcome screen

From the welcome screen, access is granted to: the Fujitsu General Limited Website, start a new project, load a previous project from our computer or get the current project running on the gateway.

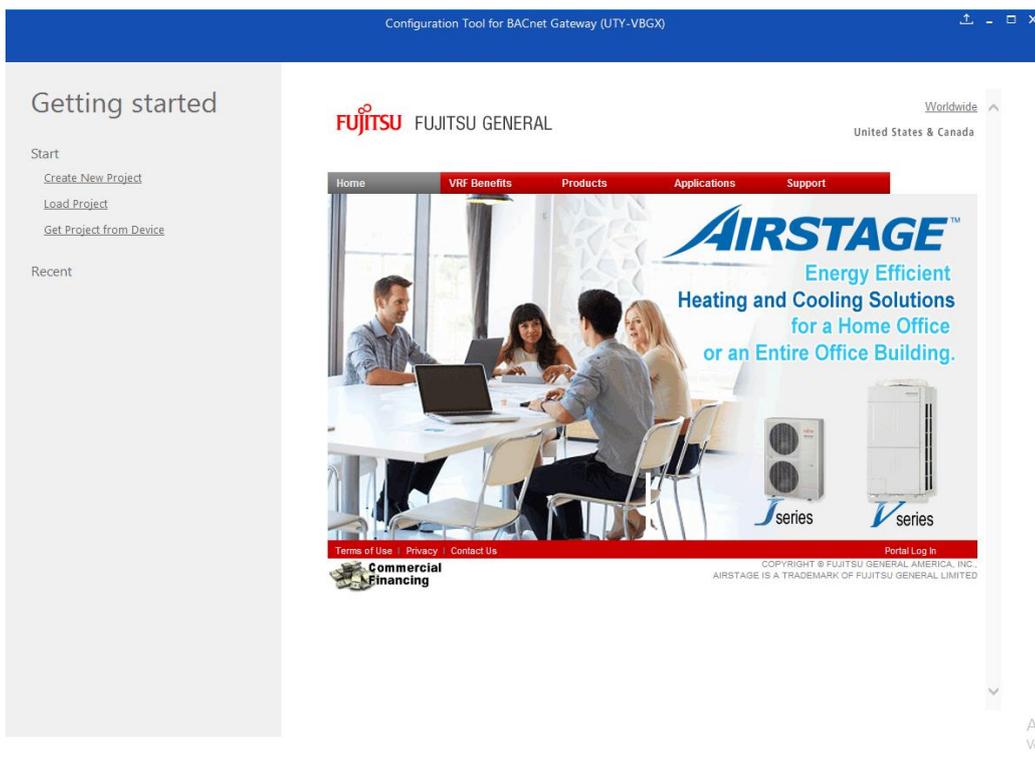

Figure 8.1 Welcome screen

#### 1. Create New Project

When pressing this button, you will be directed to the connection view. More information can be found in 8.3

#### 2. Load Project

Use this option to select a previous project you have been working with and it is already stored in your PC or an accessible storage device.

#### 3. Get Project from Device

Use this option to get the current configuration running on the gateway. Notice that to do that, you need to be connected to the gateway.

- **IP connection:** This requires Ethernet connection to the gateway and also knowing the connection password. More information about the password can be found in section 8.4.1.
- **USB connection:** This requires USB connection to the gateway.

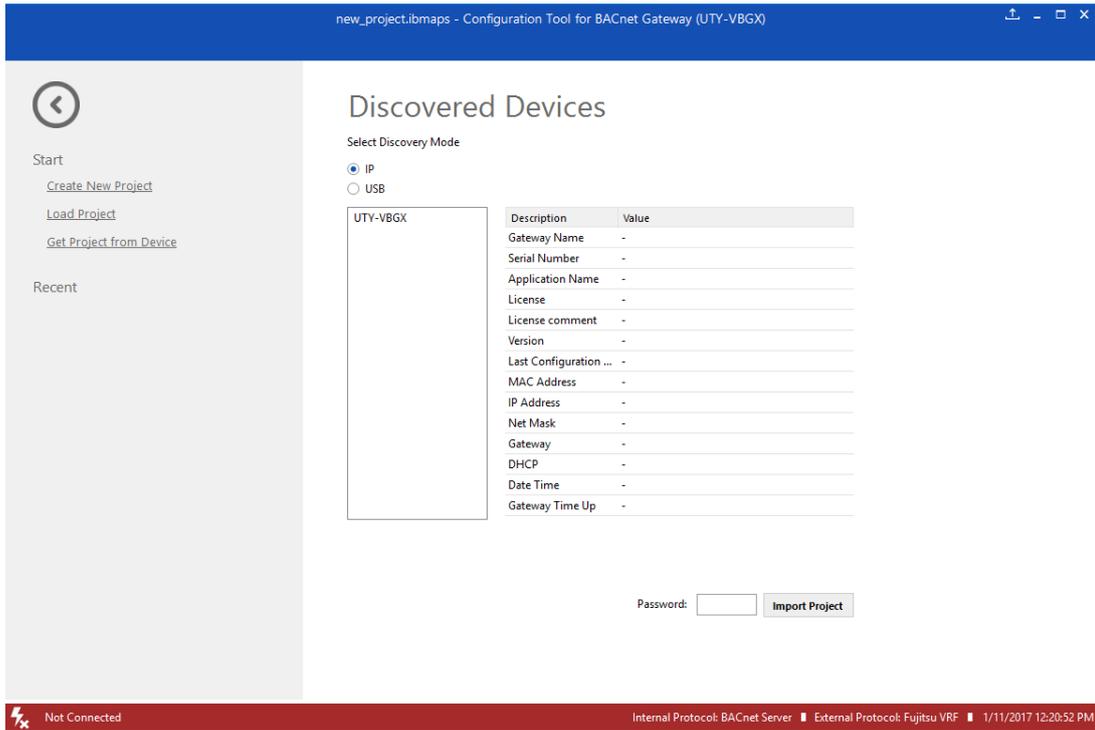

Figure 8.2 Get Project from Device view

### 8.3 Connection

Use this section to configure the connection between the laptop or desktop to the gateway.

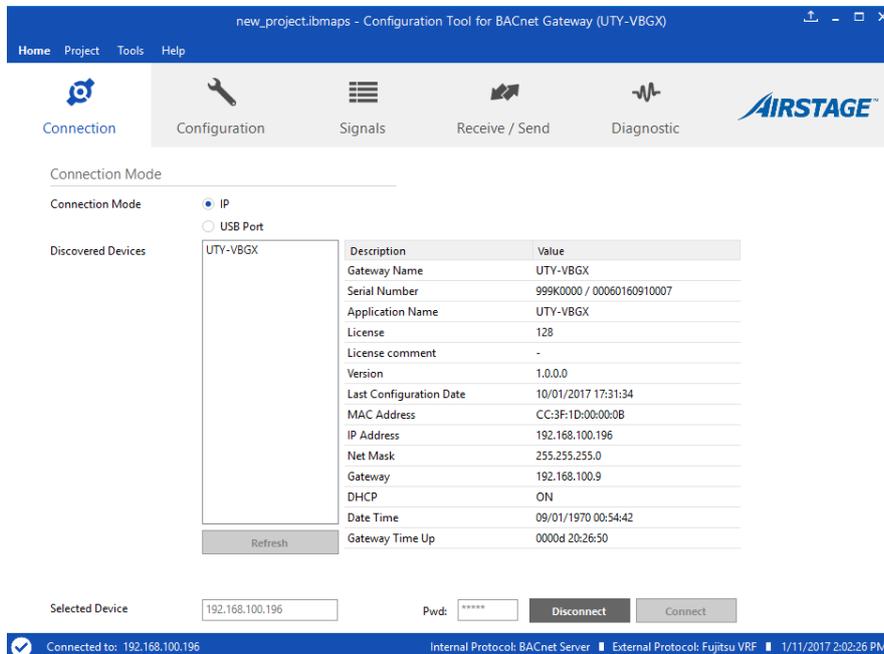

Figure 8.3 Connection configuration

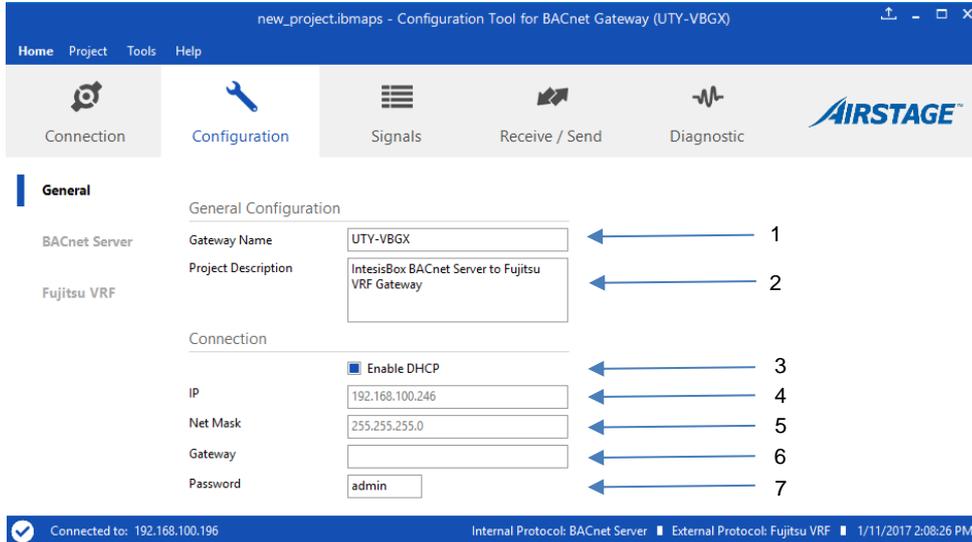

**NOTE:** If using IP connection, the Configuration Tool will automatically scan the IP network for the gateway and will show it in the list. Notice that in that case, a password is required. Default values for IP connection are: **IP: 192.168.100.144 / Password: admin**  
If installing more than one BACnet Gateway for VRF System, connect them one by one and assign an IP to each of them in case DHCP is not available.

## 8.4 Configuration

In this section is where main configuration for the signals is carried out.

### 8.4.1 General

Set the general gateway parameters.

**Figure 8.4** General configuration

1. **Gateway Name:** Descriptive name for the gateway in its use on the Configuration Tool.
2. **Project Description:** Short description of the project.
3. **Enable DHCP:** Enables and disables DHCP usage by the gateway.
4. **IP:** Enter the IP address for the gateway (**192.168.100.144** by default).
5. **NetMask:** Enter the gateway net mask address (**255.255.255.0** by default).
6. **Gateway:** Enter the router or default gateway address if needed. In case you don't want to use it, leave it blank.
7. **Password:** Enter the access password to allow IP connection to the box (**admin** by default).

8.4.2 BACnet Server

Set the BACnet parameters

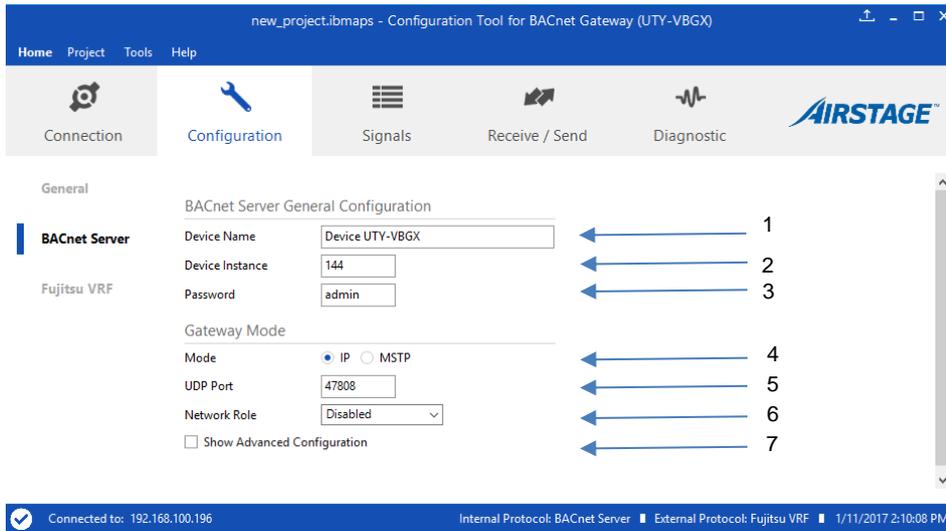

Figure 8.5 BACnet/IP interface configuration

1. **Device Name:** Device BACnet name and description (*Device UTY-VBGX* by default).
2. **Device Instance:** Device BACnet number (*144* by default, if more than one UTY-VBGX is present, this have to be a unique number for each BACnet Gateway for VRF System).
3. **Password:** Password to allow IP connection (*admin* by default).
4. **Mode:** BACnet IP mode is the only one available.
5. **UDP Port:** Used port for BACnet IP communications (*47808* by default)
6. **Network Role:** Select the gateway role from a BACnet network device point of view:
  - a. **Disabled**
  - b. **Foreign device**
  - c. **BBMD**
7. **Show advanced configuration:** Enables Notification Classes configuration.

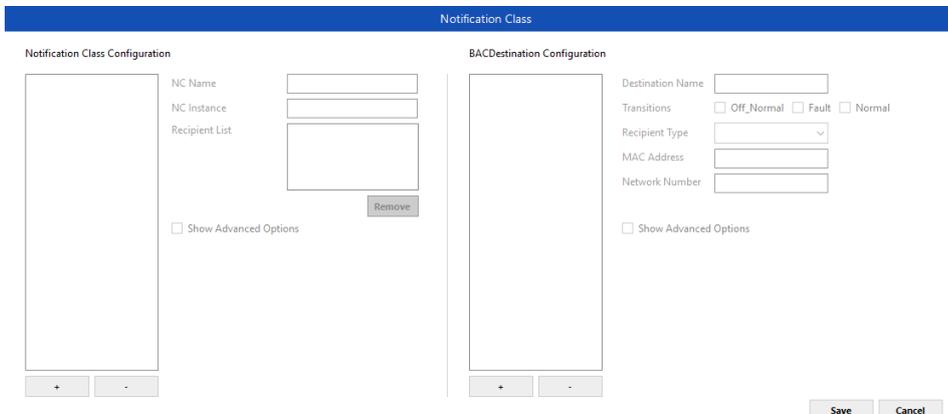

Figure 8.6 Notification Class configuration

### 8.4.3 Fujitsu VRF

Set the Fujitsu VRF parameters

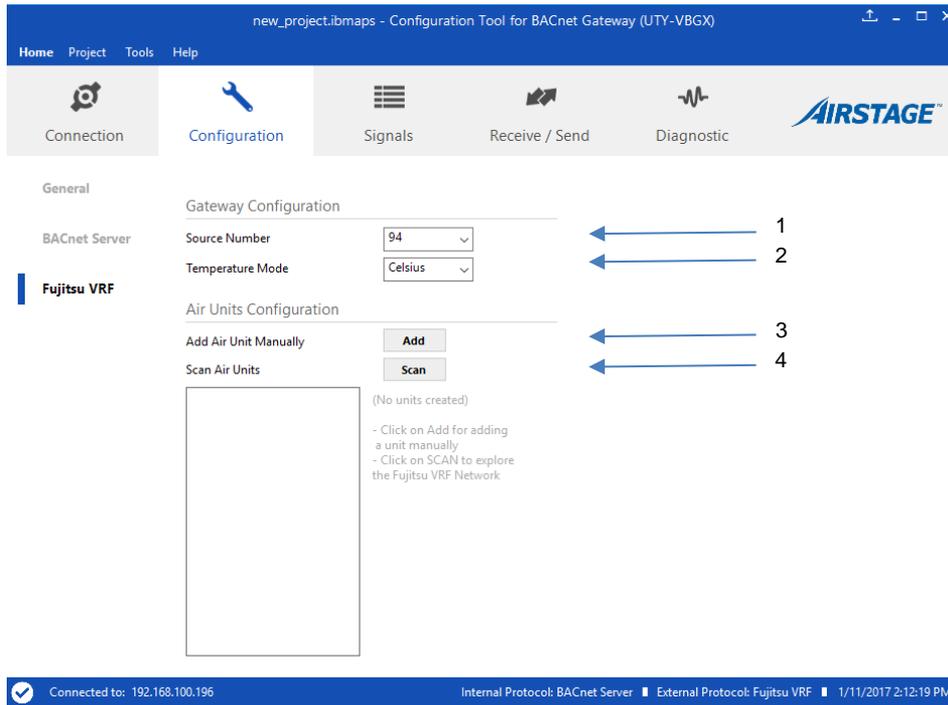

Figure 8.7 Fujitsu VRF interface configuration

1. **Unit Address:** Enter the BACnet gateway unit address of LON (values from 92 to 95 with no duplication within the same VRF network).
2. **Temperature Mode:** Enter the desired temperature units to be used (Celsius or Fahrenheit).
3. **Add Air Unit Manually:** Use this option to introduce units manually in the configuration.

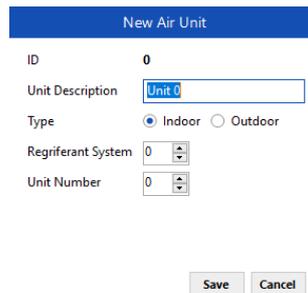

Figure 8.8 Add units manually

4. **Scan Air Units:** Use this function to scan the VRF network automatically to look for the current units connected to the system.

**Note:** Scan may take from 5 to 6 minutes depending on each installation specs.

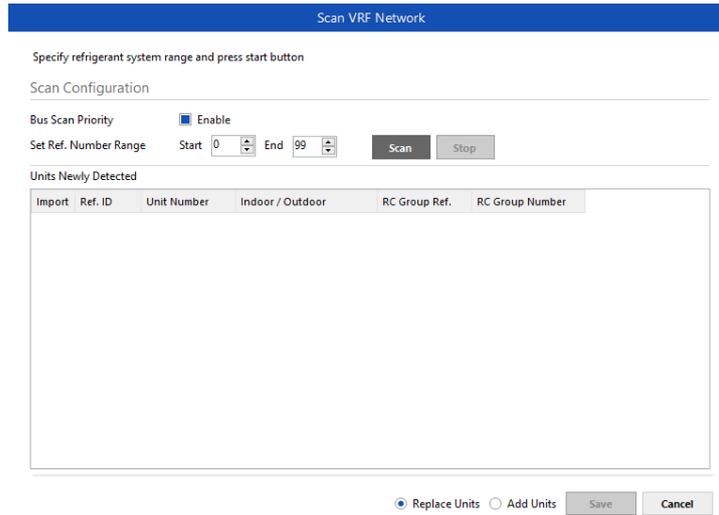

Figure 8.9 Units scan on the FGL bus

### 8.5 Signals

Check the current available signals according to the units configured on the configuration tab (see section 8.4.3).

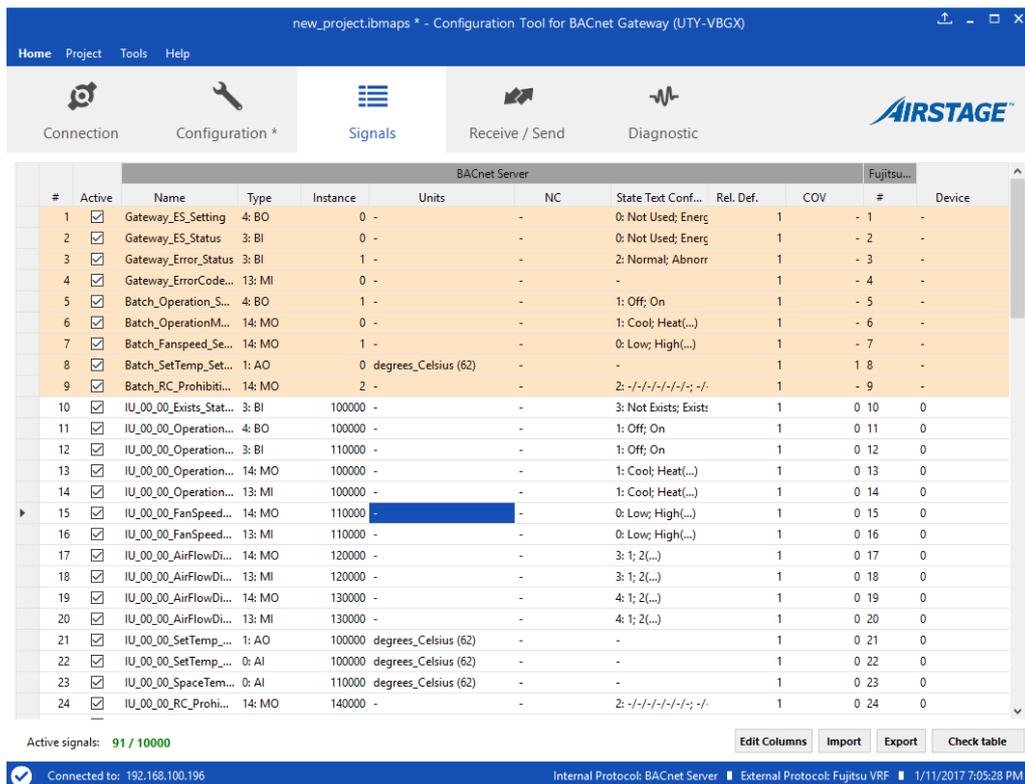

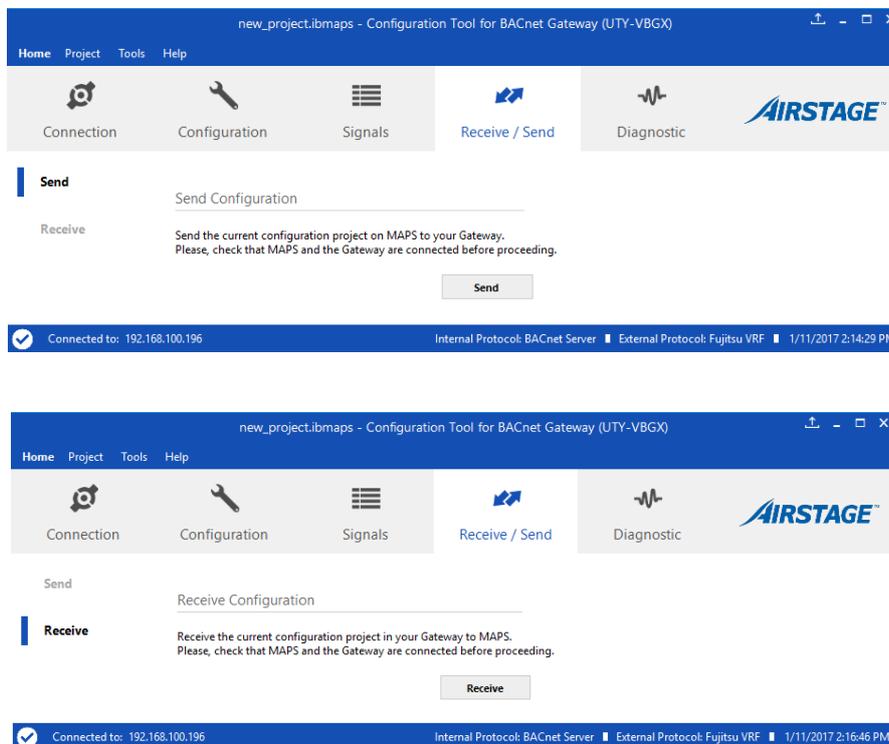

Figure 8.10 Signals' Viewer

- Signal number:** Configuration Tool internal reference.
- Active:** Indicates if the signal is currently active for this configuration. If not, it will not be considered by the tool when downloading it to the gateway.
- Object BACnet name:** Signal's descriptive name that identifies the signal.
- BACnet type:** Type of BACnet object.

5. **Object Instance:** BACnet object instance. This can be a fixed number or a formula for the identification of each element.
  6. **Units:** Units applied to each object.
  7. **NC:** Notification Class.
  8. **State text configuration:** Enums the State text to be shown.
  9. **Relinquish default value:** Indicates the current relinquish default value for this object.
  10. **COV:** Sets the COV increment value for this object.
  11. **#:** Internal gateway address for each register.
  12. **Device:** FGL device number associated to this register.
- 
- a) **Edit Columns:** Enables or disables visible columns.
  - b) **Import:** Imports a previous existing configuration. Only Excel format is supported.
  - c) **Export:** Exports the current configuration. Only Excel format is supported.
  - d) **Check table:** Checks the current configuration to make sure

## 8.6 Receive/Send

Send or receive the current configuration of the gateway.

**Figure 8.11** Send and receive options

### 8.7 Diagnostic

Use this setting to check the current communication status of the gateway on both: BACnet and FGL.

Communication with the box, the BACnet side and the Fujitsu system can be check using the viewer available.

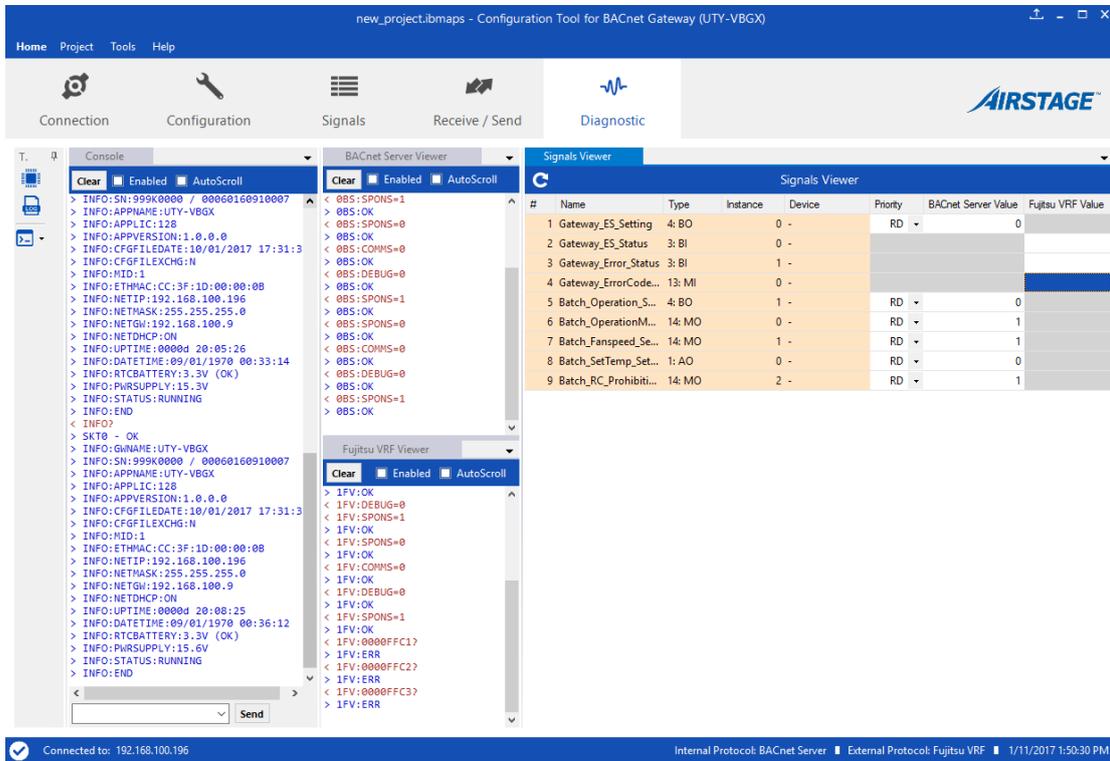

Figure 8.12 Diagnostic tool

1. **Hardware Test:** Checks the current hardware status of the gateway to ensure that is not faulty.
2. **Log:** Enables the LOG Record Mode which starts logging communications from all viewers and stores it in a zip file. This file can be sent directly to the support team to check any unexpected behavior of the box.
3. **Commands:** It sends specific commands to the gateway to perform general actions.
  - **INFO?** Asks the gateway to identify itself and show basic information.
  - **RESET!** Resets the gateway. This is not a back to factory settings action.
  - **Enable COMMS** Enables communication between the gateway and the Configuration Tool
  - **Disable COMMS** Disables communication between the gateway and the Configuration Tool

#### 8.7.1 Console

Shows basic information about the gateway and communication between BACnet and VRF systems.

#### 8.7.2 BACnet Server Viewer

Shows specific information about the BACnet communication.

#### 8.7.3 Fujitsu VRF Viewer

Shows specific information about the VRF network communication.

## 8.7.4 Signals Viewer

Check the current signal values on both: BACnet and VRF network side (connection to the VRF network and/or BACnet client is required).

The Signals Viewer can be used even though only one system is connected to the gateway, BACnet or Fujitsu AC. Therefore, it becomes convenient for supervision and testing the system.

In order to force a specific value to a signal, double-click the corresponding **BACnet Server Value** or **Fujitsu VRF Value** cell in the table. Notice that grey cells can't be read or written. Changing its value in this way, will make:

- The content of the corresponding object will be changed to this value.
- If the signal is write-enabled, it will trigger a suitable command to Fujitsu AC system.

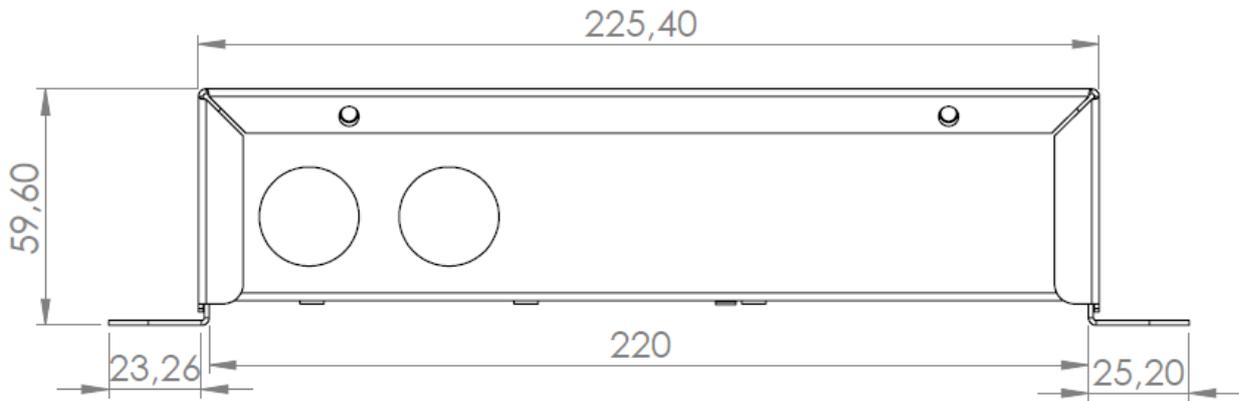

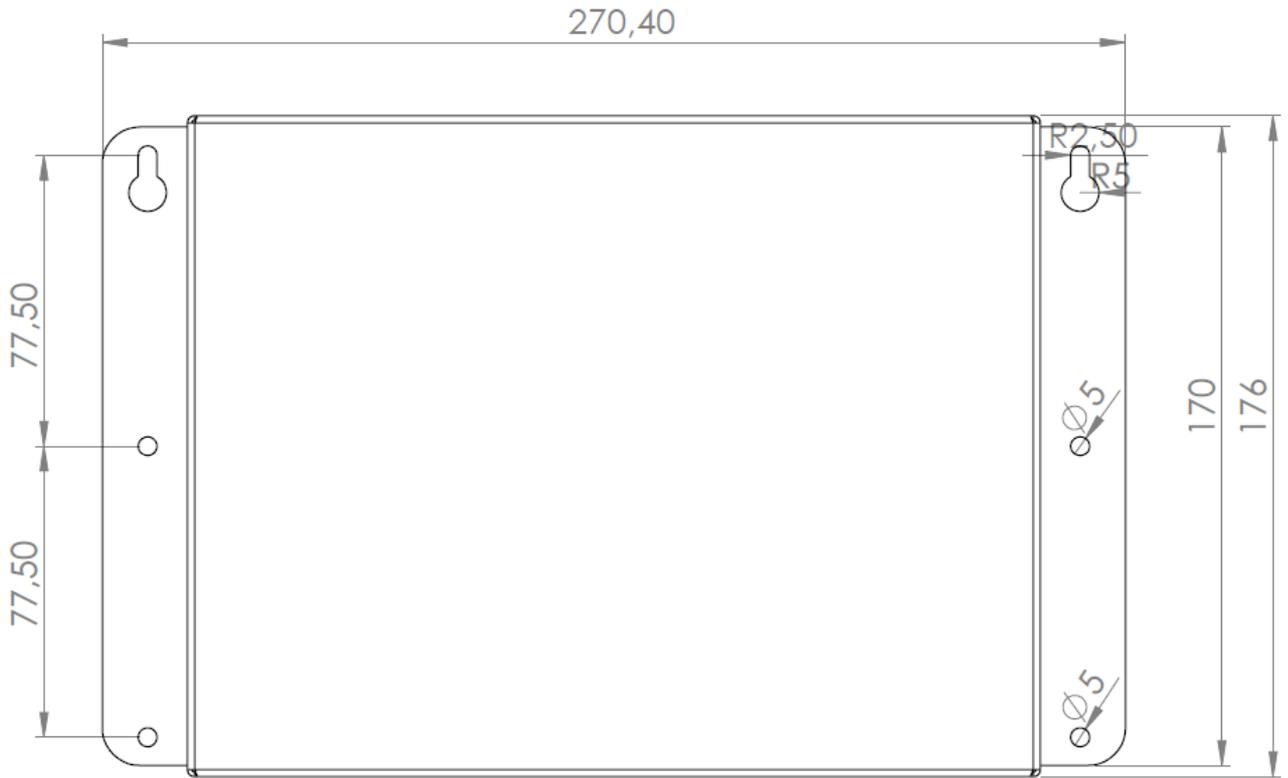

## 9 AC Unit Types compatibility

VRF Gateway for VRF System is compatible with units that are later than VRF-II series.

## 10 Mechanical & electrical characteristics

<b>Enclosure</b>	Material: Plastic, type PC (UL 94 V-0) Dimensions: 90mm x 88mm x 56mm Weight: 1.2 Kg Color: Light Grey RAL 7035
<b>Mounting</b>	Vertical Wall
<b>Power</b>	Screw terminal block for power connection (3 poles) 100 to 240VAC 50 to 60Hz 4.6W max.
<b>Terminal wiring</b> Power supply and low-voltage signals	Per terminal: solid wires or stranded wires (twisted or with ferrule) 1 core: 0.5 ... 2.5mm <sup>2</sup> 2 cores: 0.5 ... 1.5mm <sup>2</sup> 3 cores: not permitted
<b>Ethernet port</b>	Connector: RJ45 for shielded cat5 or higher class cable  Communication speed: 10/100 Mbps  Communicates with: BACnet IP network PC for gateway configuration
<b>Port A LON</b>	A1 A2 (2 poles screw terminal) Signal Ground  A3 A4 (2 poles screw terminal) Fujitsu VRF network connection
<b>USB port</b>	Mini Type-B receptacle connector and USB 2.0 compliant Only for gateway configuration and diagnostic 1500VDC isolation from others ports
<b>Battery</b>	Size: Coin 20mm x 3.2mm Capacity: 3V / 225mAh Type: Manganese Dioxide Lithium
<b>LED indicators</b>	1 x Power 1 x Error
<b>Operational temperature</b>	0°C to +60°C
<b>Operational humidity</b>	5% to 95%, non-condensing
<b>Protection</b>	IP20 (IEC60529).
<b>RoHS conformity</b>	Compliant with RoHS directive (2002/95/CE).

### 12.1 Error codes

Below you can find a list of error codes from Fujitsu air conditioning system.

#### V-II/J-II/VR-II Series

Present_Value	Error Code	Error Description
1	-	-
2	12	Remote controller communication error
3	13	Communication error between Outdoor unit
4	14	Network communication error
5	15	Scan error
6	16	Peripheral device communication error
7	21	Initial setting error
8	26	Address setting error
9	27	Master unit, slave unit set-up error
10	28	Other setting error
11	31	Indoor unit power supply abnormal
12	32	Indoor unit main PCB error
13	35	Manual auto switch error
14	37	Indoor unit transmission PCB error
15	38	Network convertor PCB error
16	41	Room temp. sensor error
17	42	Indoor unit Heat Ex. sensor error
18	51	Indoor unit fan motor1 error
19	53	Water Drain Abnormal
20	5U	Indoor unit error
21	61	Outdoor unit power supply abnormal
22	62	Outdoor unit main PCB error
23	63	Inverter PCB error
24	67	Short interruption detection protected operation
25	68	Magnetic relay error
26	69	Outdoor unit transmission PCB error
27	71	Discharge Temp Sensor Error
28	72	Compressor Temp Sensor Error
29	73	Outdoor unit Heat Ex. sensor error
30	74	Outdoor Temp Sensor Error
31	75	Suction Gas Temp Sensor Error
32	77	Heat sink temp. sensor error
33	82	Sub-cool Heat Ex. gas temp. sensor error
34	83	Liquid pipe temp. sensor error
35	84	Current sensor error
36	86	Pressure sensor error
37	92	Compressor 2 error
38	93	Compressor start up error
39	94	Trip detection
40	95	Compressor motor control error
41	97	Outdoor unit fan motor 1 error
42	99	4-way valve error
43	9U	Outdoor unit error
44	A1	Discharge temperature 1 abnormal
45	A2	Discharge temperature 2 abnormal
46	A3	Compressor temperature abnormal

47	A4	Pressure abnormal 1
48	A5	Pressure abnormal 2
49	AA	Special operation error
50	AC	Ambient temperature abnormal
51	C1	Main PCB error
52	C2	Transmission PCB error
53	C3	PCB 1 error
54	C4	PCB 2 error
55	C5	PCB 3 error
56	C6	PCB 4 error
57	C7	PCB 5 error
58	C8	Input device error
59	C9	Display device error
60	CA	EEPROM error
61	CC	Sensor error
62	CF	External connector error (USB memory)
63	CJ	Other parts error
64	-	Unknown
65	17	Electricity charge apportionment error
66	98	Outdoor unit fan motor 2 error
67	9A	Coil (Expansion Valve) error
68	52	Coil (Expansion Valve) error
69	J1	RB unit error
70	A6	Outdoor heat exchanger temperature abnormal
71	29	Connection unit number error in wired remote controller system
72	3A	Indoor unit communication circuit (wired remote controller) error

12.2 RC Prohibition

Remote Control Prohibit commands can be set/read using the values in the following correspondence table.

State Text	Description
FL	Filter display reset operation prohibited
ON	Start operation prohibited (S/V Series do not have this function)
OP	Start/stop operation prohibited
MD	Operation mode operation prohibited
TP	Set temperature operation prohibited
TR	Timer setting prohibited
ALL	All prohibited
